

Planets

Class name: planets	
Class Attributes:	Class Collaborations (other classes):
• Self.planet • Self.x • self.y • self.turtle	• Turtle class • point
Class Methods:	Class Collaborations (other classes):
• <code>__init__()</code>: ◦ Self.x and self. Y to get the position of the planet ◦ Self.turtle to draw the planets • <code>distance_from_origin()</code>: ◦ Function to compute distance from origin to see what planet you landed on ◦	•

Game

Class name: game	
Class Attributes:	Class Collaborations (other classes):
• Self.screen • Self.running • Self.clock • self.planets	• planets
Class Methods:	Class Collaborations (other classes):
• <code>Def __init__ self:</code>	•

Class name: Rocket

Class Attributes:	Class Collaborations (other classes):
• <code>self.x</code> – Holds the x-coordinate of the rocket. • <code>self.y</code> – Holds the y-coordinate of the rocket. • <code>self.speed</code> – Determines how fast the rocket moves. • <code>self.image</code> – Stores the image of the rocket (if using graphics).	• Turtle class
Class Methods:	Class Collaborations (other classes):
• <code>__init__()</code> Initializes the rocket's position and attributes. • <code>move_left()</code> Moves the rocket left by decreasing the x-coordinate. • <code>move_right()</code> Moves the rocket right by increasing the x-coordinate. • <code>move_up()</code> Moves the rocket upward by decreasing the y-coordinate. • <code>move_down()</code> Moves the rocket downward by increasing the y-coordinate. • <code>check_collision(planet)</code> Checks if the rocket has landed on a planet and returns planet info.	• Turtle class
